

## Resizing Your Images for SSDCC Website Gallery Using Photoshop

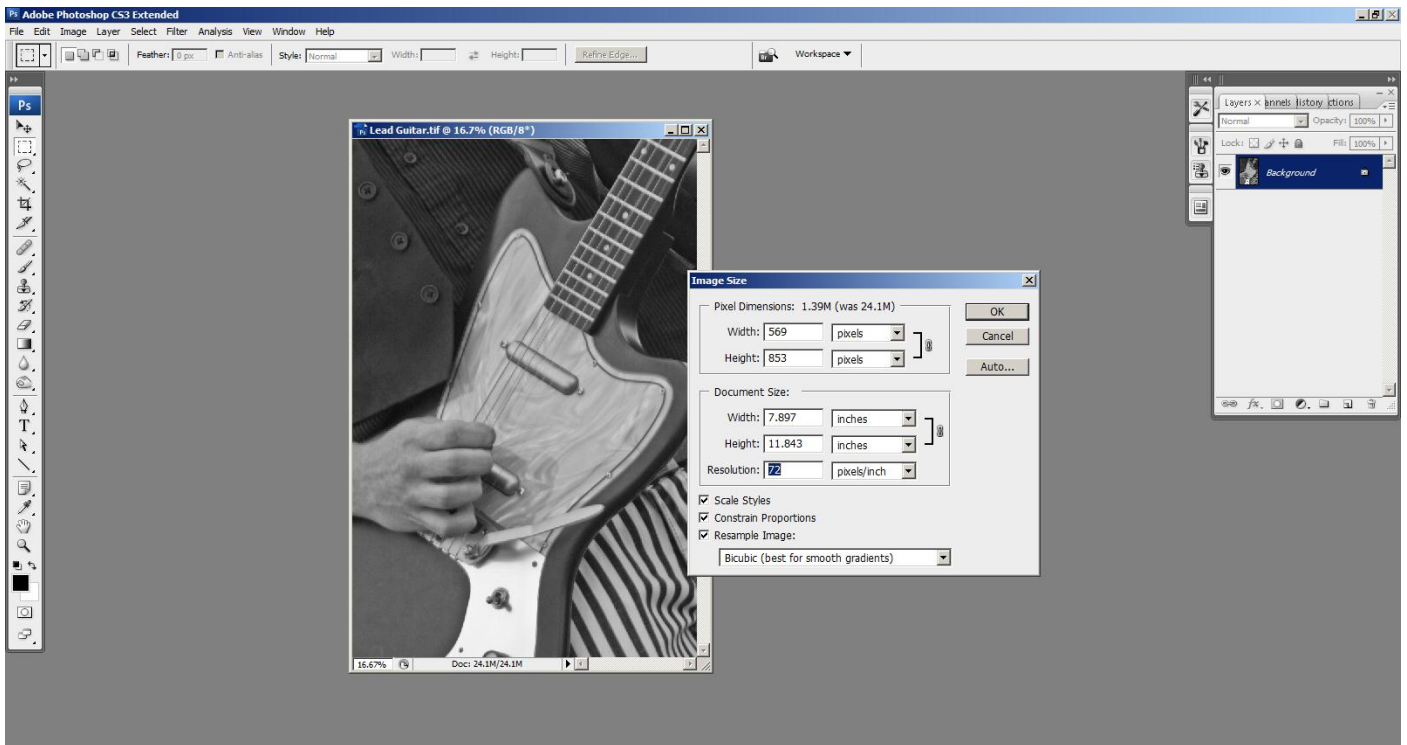

This tutorial will show you how to resize your images for use in the SSDCC Website Gallery, using the full version of Photoshop. ( Not Elements ) So to begin with, open up your copy of Photoshop, ( You can get a trial copy from me to try if you don't have Photoshop, just ask ) and open up your image by going to File/Open and navigating to its file. I have opened up 'Lead Guitar.tif' as you can see.

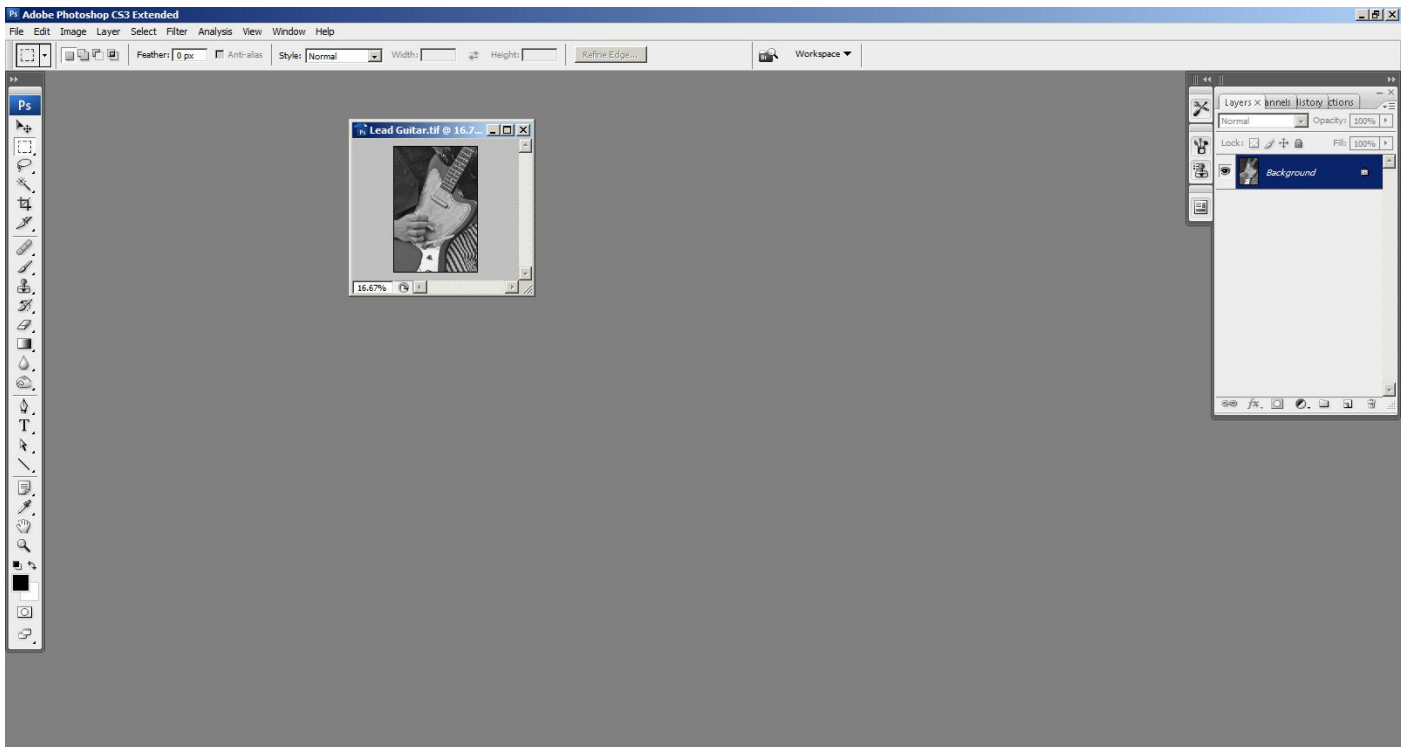

Now go to, either, Image/Image Size, press Alt+Ctrl+I or right click as I have done on the bar at the top of your image and choose Image Size.

You will see the Image Size dialogue pop onto your screen. Change the resolution to 72 pixels per inch and make sure that the pixel dimension longest side ( Height for Portrait or Width for Landscape) is between 600 and 1000 pixels. It is important that it is not smaller than 600. As you can see, mine is a portrait format image and the longest side is 853 pixels which is fine.

Click OK and Photoshop will resize your image. As you can see your image has been resized and all that is left to do is resave it as a .jpg file by going to File/Save As.

Regards, Paul. Many thanks to Chuck Eccleston, this was adapted from his original tutorial.
